Appl. No.: 10/560,194

Reply to Office Action of: 07/02/2009

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Please cancel claim(s) 5, 8-9, 16 and 19-20 without prejudice.

Listing of Claims:

- (Currently amended) A receptacle connector assembly, comprising:
 - a connector housing having a top surface, a bottom surface, and a peripheral wall located between the top surface and bottom surface;
 - a plurality of terminals mounted in the connector housing and extending from the peripheral wall;
 - a shielding member removably attached to the top surface of the connector housing and having a portion extending over the terminals; and
 - a supporting member removably attached to the connector housing and covering the portion of the shielding member extending over the terminals, and
 - a mounting mechanism for removably mounting the supporting member to the connector housing, wherein the mounting mechanism comprises a recess formed at each of two opposing ends of the connector housing for pressfitting opposing ends of the supporting member.

Reply to Office Action of: 07/02/2009

- 2. (Original) The receptacle connector assembly according to claim 1, wherein the shielding member includes a plurality of positioning pins, and the connector housing is formed with a plurality of openings at locations corresponding to the positioning pins for insertion of the positioning pins.
- 3. (Original) The receptacle connector assembly according to claim 2, further comprising a locking mechanism for removably locking the shielding member to the connector housing.
- 4. (Original) The receptacle connector assembly according to claim 3, wherein the locking mechanism comprises:
 - a plurality of resilient tabs formed on the shielding member, and
 - a plurality of protrusions formed on the connector housing at locations corresponding to the resilient tabs to be removably locked to the protrusions.
- 5. (Cancelled)
- 6. (Currently amended) The receptacle connector assembly according to claim [[5]] $\underline{1}$, wherein the mounting mechanism comprises:
 - a pair of posts symmetrically arranged on the top surface at two opposing ends of the connector housing; and
 - a pair of holes formed on the supporting member at locations corresponding to the posts for insertion of the posts.

Reply to Office Action of: 07/02/2009

7. (Original) The receptacle connector assembly according to claim 6, wherein the posts serve as rivets to secure the supporting member on the connector housing.

8-9. (Cancelled)

- 10. (Original) The receptacle connector assembly according to claim 1, wherein the supporting member is made of an insulating material.
- 11. (Original) The receptable connector assembly according to claim 10, wherein the supporting member is made of plastics.
- 12. (Currently amended) An IC card connector, comprising:
 - a header having a top surface, a bottom surface, and a peripheral wall located between the top surface and bottom surface;
 - a metal shield mounted over a portion of the top surface of the header;
 - a plurality of terminals mounted in the header and extending from the peripheral wall;
 - a shielding member removably attached to the top surface of the header and having a portion extending between the shield and the terminals; and
 - a supporting member removably attached to the header and extending between the metal shield and the shielding member, and

Reply to Office Action of: 07/02/2009

- a mounting mechanism for removably mounting the supporting member to the header, wherein the mounting mechanism comprises a recess formed at two opposing ends of the header for press-fitting opposing ends of the supporting member.
- 13. (Original) The IC card connector according to claim 12, wherein the shielding member includes a plurality of positioning pins, and wherein the header is formed with a plurality of openings at locations corresponding to the positioning pins for insertion of the positioning pins.
- 14. (Original) The IC card connector according to claim 13, further comprising a locking mechanism for removably locking the shielding member to the header.
- 15. (Original) The IC card connector according to claim 14, wherein the locking mechanism comprises:
 - a plurality of resilient tabs formed on the shielding member; and
 - a plurality of protrusions formed on the header at locations corresponding to the resilient tabs to be removably locked to the protrusions.
- 16. (Cancelled).
- 17. (Currently amended) The IC card connector according to claim [[16]] 12, wherein the mounting mechanism comprises:
 - a pair of posts symmetrically arranged on the top surface at two opposing ends of the header; and

Reply to Office Action of: 07/02/2009

- a pair of holes formed on the supporting member at locations corresponding to the posts for insertion of the posts.
- 18. (Original) The IC card connector according to claim 17, wherein the posts serve as rivets to secure the supporting member on the header.
- 19-20. (Cancelled)
- 21. (Original) The IC card connector according to claim 12, wherein the supporting member is made of any insulating materials.
- 22. (Original) The IC card connector according to claim 21, wherein the supporting member is made of plastics.
